

Doctor Appointment System

1. Problem Statement

Online Book Appointment For easily Available And Fast Service

2. Introduction

In this Project we aim to solve the traditional issues of hospital visit and rigorous waiting period for an appointment. The existing system provided paper based solution for keeping OPD records of patients and hospital details, but it gives overload to Doctor and patient too. The main issues were irritating visits to hospitals, doctors and difficulties in visiting for aged and pregnant patients and also inappropriate data keeping, time wastage in storage, retrieval also patients were unable to understand the prescription etc. These issues are solved by providing a separate user account for doctors and other staff. Keeping each patient's data separate and track previous visits in a single click.

3. Scope

Doctor , Nurse , Patient , Pathology

4. Database Table

User Information

Password

Patient Registration

Appointment

Doctor Information

Investigation chart

Medical history Info

5. Functional Features
