

BookMyMaid

❖ Problem Statement:

In rush lifestyle of metro cities, problem arises when there is no one to look after house works. Thus, its needful for such clients to hire some responsible as well as skillful maid to do such works. But as far as scenario, we don't see a system to manage and make work such staff under a single portal.

So, to overcome this issue, we group 16 are aiming to build a website cum portal that will help organize all such skilled maid as well as customers easily.

BookMyMaid is an online platform that enables homeowners to hire domestic help. The platform offers domestic helpers across various categories including maid, babysitter, nanny, senior citizen care and cook.

❖ Application Description:

Book My Maid is a web application which will help the Customer to manage the following activities :

1. Manage Booking
2. Shows list of Maids as per services (Cook, Baby Sitters, Cleaning, Care-Taker)
3. Shows the time required for the maid from the booking (time tracking),
4. Manage the records of maids, next booking details if customer suggested.

These are the some key points of the web application (HMS).
