Project Name: **BookMyMaid**

Project Summary:

 Project BookMyMaid is a web-based application that provides facility to book maid online. It provides a common platform where user can book maid according to need and maid can get a job assigned. BookMyMaid help maids to get a rightful share of money without any middle men concept and user can get verified and trustworthy maids without any hustle.

The administrator can manage user and maids and have a control over their activities for the safety and security purpose of both. Admin can manage the requests for booking, payments and feedback of both user and maids.

The BookMyMaid Portal will provide a connection mechanism to all the maids in the area and will also provide standardization and regularity in the salaries paid to them. The online venture may also serve as an easy means to find and book maid/helpers online through the website depending on the need of the user.

The booking of maid is done online and request to maid is sent and after her acceptance the confirmation message is sent to the user. She will not be available for booking until the assigned booking is completed successfully or terminated because of any reasons.

Maid can register herself by giving her necessary details, work she can do, minimum wages she charges and necessary documents for verification regarding security reasons. She can see the booking request, work to do, history of her services and calculated amount of her work after updating the completion of work. She can complaint to admin in case of any misbehaviour from user.
